BLOG-ANYWHERE SKILL

# Your simple guide

Write a blog post in the voice you choose, for any website, and get it ready to paste.

**This guide is interactive.** Click the step buttons to jump around. Tick the boxes as you go. Select the grey boxes to copy what to type.

## What it is, in 30 seconds

| 1. You choose | 2. It writes and checks | 3. You publish |
|---|---|---|
| The voice, the keyword, the images, and whether to use your own writing. Fresh choices for every post. | It looks at what already ranks, writes the post, and checks it. It does not make facts up. | Copy it into your site, or have it saved as a draft if your site is connected. |

**NOTE** It **never publishes a post live**, never makes up facts, and never asks for a password or key in the chat. It works for Shopify, WordPress, Wix, Squarespace, Webflow, Ghost or any other site.

## The journey (click a step)

| | | |
|---|---|---|
| **1** Install | **2** Set up your site | **3** Answer the post questions |
| **4** Review and open the package | **5** Publish | **?** Commands and fixes |

Steps 1 and 2 happen **once**. Steps 3 to 5 repeat for **every post**.

## What you get for every post

- [ ] A page to open in your browser (`post-preview.html`) with a **Copy** button for every field.
- [ ] The post as clean text you can paste into your editor, as HTML code, or as Markdown.
- [ ] A list of the images with their alt text and credits.
- [ ] A plain-language check report, and a short guide to pasting it into your platform.

# 1. Install the skill

Do this once. You need the file `blog-anywhere.zip` saved on your computer (your Downloads folder is fine).

## In Claude Code (easiest: let Claude do it)

- [ ] **Open Claude Code in your project folder** and paste this:

```
I downloaded blog-anywhere.zip into my Downloads folder. Unzip it and put the
blog-anywhere folder inside .claude/skills/ in this project (create the folders if they
are missing), replacing any older copy. Then confirm that
.claude/skills/blog-anywhere/SKILL.md exists.
```

- [ ] If it cannot find the zip, give it the full path to where you saved it.
- [ ] **Start a NEW chat** in the same folder. Skills only load when a chat starts.
- [ ] **Check it worked:** type `/` and look for `blog-anywhere`, or ask "Which skills do you have?"

**By hand:** unzip the file, move the `blog-anywhere` folder into `.claude/skills/` in your project (or into `~/.claude/skills/` to use it in every project). The `.claude` folder is hidden: on a Mac press **Command + Shift + .**, on Windows choose **View, Show, Hidden items**.

## In the regular Claude chat

- [ ] Turn on **code execution** (Settings, Capabilities).
- [ ] Go to **Customize, Skills**, click **+**, then **Create skill**, then **Upload a skill**, and choose `blog-anywhere.zip`.
- [ ] Start a new chat and type `blog-anywhere`.

## Good to know

> **TIP** The skill uses small **Python** helpers. If Claude says Python is missing, ask it to help you install Python 3 and try again. Shrinking your own photos needs a free add-on called Pillow, and Claude will tell you if it is needed.

**Nothing has to be ready before you start.** It helps to have: your site's name and platform, a list of your real pages (so links are never made up), a keyword list, a sample of your own writing, and your own photos. Everything is optional.

# 2. Set up your site (once per site)

Type `blog-anywhere` in a new chat. Claude asks a few short groups of questions, one group at a time. **"I don't know" is a fine answer.** It leaves a note and moves on. It never guesses.

| Group | What it asks |
|---|---|
| A. Your site | Name, address and **platform** (Shopify, WordPress, Wix and so on), what the site does, the goal of the blog. |
| B. Readers | Who reads it, what they worry about, topics that belong, topics to avoid, a keyword list if you have one. |
| C. Real pages | The pages posts may link to (title, address, type). **Posts link only to pages on this list.** |
| D. Voice starting point | Optional. Each post asks about voice again, so skip this if you like. |
| E. Rules and facts | Anything that must never be published, real facts posts may use, how to handle quoted text. |
| F. Images | Your own photos, free stock photos, credit rules. |
| G. Publishing | Is your site connected to Claude? How often will you post? Who approves a post? |

- [ ] **Read the summary** Claude gives back, correct anything wrong, then say **go**.
- [ ] Claude makes a folder called `blog-sites/your-site/` that holds your answers, your page list, your keywords and every post.

## Optional: save your own voice

Only needed if you want to pick **"my own voice"** for some posts. Type `blog-anywhere voice`.

- [ ] Give **3 to 5 samples** of your own writing (about 500 words or more is best).
- [ ] Claude **measures your habits** (sentence length, how often you say "I", "we" or "you", questions, reading ease) and writes your voice notes **only from what you wrote**.
- [ ] It writes a **short sample**. Say what sounds like you and what does not. After up to three rounds, you approve it, and that becomes your voice anchor.

> **TIP** You do **not** have to save a voice. You can pick a different voice for every post, and Claude never assumes one for you.

# 3. Answer the post questions (every post)

Type `blog-anywhere` or `blog-anywhere post your topic`. **Before it writes anything**, Claude asks five short things. Nothing is assumed: every post is your choice.

## 1. The voice for this post

Pick **one**, **mix two**, or describe your own:

| | |
|---|---|
| Friendly and conversational | Playful and witty |
| Professional and authoritative | Educational and clear |
| Warm and inspirational | Premium and refined |
| Calm and reassuring | **My own voice**, from my writing samples |
| Bold and direct | **Describe it yourself** in your own words |

Then say the **humor** (none, light or playful), **"I" or "we"**, the **main point** of the post in one sentence, and **who it is for**. This applies to **this post only**. If you describe a voice, Claude writes it back as a few short rules and waits for your OK.

## 2. The keyword

**Choose** from your list, **give** a specific one, or **ask** for ideas (these are marked as unverified, because Claude cannot see real search numbers).

## 3. The images

Your own photos, free stock photos, specific files you name, or none for now. Say **how many** and **where** if you have a view.

## 4. Your own content

| | |
|---|---|
| **Write it for me** | You have only a topic. Claude writes the whole post. |
| **Build on my notes** | You have notes or a rough draft. Claude keeps your facts and ideas, builds the post, and marks everything it added. |
| **Use mine exactly** | You have finished text. Claude changes **nothing** in your wording. It only adds the search fields, images and checks. Ideas for changes are listed separately, and only applied if you say yes to that exact change. |

## 5. Is your site connected to Claude?

Yes: Claude can save the post as a **draft**. No or unsure: you get the copy-and-paste package. Details are in step 5. Never share a password or key to connect a site.

> **TIP** Claude reads your answers back. **Check them, then say go.** After the post it may offer to save your voice choice as a named voice for next time. Say yes only if you want that.

# 4. Review it, then open your package

## What Claude does between your answers and the post

- [ ] **Research.** It looks at the top three results for your keyword and notes their length and structure. It uses them for **structure only** and never copies their words.
- [ ] **Outline.** It shows the outline. **Say OK or change it** before it writes.
- [ ] **Writing.** It writes in the voice you picked. It uses only true facts, and every gap becomes a marked note for you.
- [ ] **Checks.** Title and description length, your keyword in the right places, alt text on every image, links, questions section, and (for your own voice) a comparison with your measured habits.

## Open your package

Open `post-preview.html` in your web browser. It is inside `blog-sites/your-site/posts/your-post/`, and a ZIP of it sits next to that folder. Nothing in it is sent anywhere.

| | |
|---|---|
| 1. Fields to paste | Title, search title, description, address ending, summary, tags and more. Each has a **Copy** button and a character counter. |
| 2. The post itself | **Copy formatted post** for a normal visual editor. **Copy HTML code** for an editor's code view. **Copy Markdown** for editors that use it. |
| 3. Images | Every image with its alt text, where it goes and any credit. |
| 4. Structured data | Optional. Many sites add this already, so check first. |
| 5. Where to paste | Short steps for Shopify, WordPress and others. |
| 6. Checks | **PASS** is fine. **WARN**: look at it and decide. **FAIL**: fix before publishing. Ask Claude to fix it and rebuild. |
| 7. Before you publish | A tick list so nothing is missed. |

## Things only you can finish

- [ ] Replace every `[[INTERNAL: ...]]` link with the real page address.
- [ ] Replace each `[IMAGE ...]` marker with your uploaded image, then delete the marker line.
- [ ] Fill in or remove any `TODO` note.

# 5. Publish

## Option A: your site is connected to Claude

- [ ] Claude shows you **exactly** what it will send: title, post, search fields, tags, images, and that it will be a **draft**.
- [ ] Say **"yes, send it as a draft"**. It creates a **draft only**. It never publishes, never schedules, and never edits a live post.
- [ ] Open the draft on your site, check it, and press **publish yourself**.
- [ ] If the connection can only publish (not make drafts), Claude will not use it and gives you the copy-paste package instead.

## Option B: copy and paste (works everywhere)

| | |
|---|---|
| **Shopify** | Online Store, Blog posts, Create blog post. Paste the title. In Content paste the formatted post, or click the **<>** button and paste the HTML code. Fill Excerpt, Blog, Tags, Featured image. Under Search engine listing paste the page title, description and URL handle. Save as **Hidden**, preview, then set Visible. |
| **WordPress** | Posts, Add New. Paste the title, then the formatted post (or a Custom HTML block with the HTML code). Set slug, excerpt, categories, tags and featured image. Paste the search title and description into your SEO plugin. Save as draft, preview, publish. |
| **Wix, Squarespace, Webflow, Ghost** | New blog post, paste the title, paste the formatted post (or HTML in a code block; Ghost also takes Markdown). Find the SEO settings for title, description and slug. Save as draft, preview, publish. |

Menu names change, so look for the closest match. These steps come from general knowledge of each platform.

## Before you go live

- [ ] I pasted the title, summary and search fields.
- [ ] The post looks right in my site's **preview** (headings, lists, links, spacing), including on a phone-sized window.
- [ ] Every image is in place with its alt text, and no marker lines are left.
- [ ] Every `[[INTERNAL: ...]]` link and `TODO` is gone.
- [ ] I read it once out loud and it sounds the way I wanted.
- [ ] I published as **draft or hidden first**, then made it live.

# Commands and quick fixes

Select a grey box to copy it. Type it in a chat inside your project.

```
blog-anywhere
```

Start, or carry on: sets up your site if needed, then writes the next post.

```
blog-anywhere new-site
```

Set up a new site.

```
blog-anywhere voice
```

Build or refresh your own voice from your writing samples.

```
blog-anywhere post how to choose a reusable water bottle
```

Write a post on a topic or keyword (use your own).

```
blog-anywhere package your-post-name
```

Rebuild a post's package after you or Claude edited it.

## If something looks wrong

| | |
|---|---|
| The skill does not show up | Check that `.claude/skills/blog-anywhere/SKILL.md` exists in your project, then start a **new** chat. |
| Claude says Python is missing | Ask it to help you install Python 3, then try again. |
| A Copy button does nothing | Select the text in the preview and press Ctrl+C (Cmd+C on a Mac). |
| The pasted post looks wrong | Try the other copy button. Use **Copy HTML code** in the editor's code or HTML view. |
| The check shows FAIL | Read the line and ask Claude to fix it and rebuild. |
| My photo is not in the package | Check the file path, or put the photo in your site's `images-incoming` folder. |
| It does not sound like me | Pick **My own voice** and give more of your writing, or **describe it yourself** in your own words. |

## Get the best results

- [ ] **Give real facts.** A gap is better than a wrong number.
- [ ] **List your real pages** so links are never made up.
- [ ] **Use your own photos** for anything about your own people, products and results.
- [ ] **Read the outline** before you say OK.
- [ ] **Publish as a draft first,** every time.
